General Fire Apparatus SCBA Partnership Maintenance Service Program

This Partnership Service provides you with Mobile SCBA Regulator Performance Flow Testing where we come to your Fire Department to provide you with on site MSA SCBA flow testing and repairs which is recommended by NFPA 1852 and MSA manufacture to be done annually as a progressive preventative maintenance program.

Fire Department's Portion of this Maintenance Program

Follow **YOUR** Department Respiratory Standards, MSA Air Mask User Inspection & Operational Instruction Manuals and to Schedule Flow Testing and Repairs of your SCBA'S as needed. Any equipment which does not pass your routine inspection shall be taken out of service and contact shall be made to **General Fire Apparatus** to inspect, repair flow test and return to service with documentation as to service performed.

Fire Department will provide access to all SCBA equipment that needs to be tested. If department has personnel available to assist in testing they will be responsible for retrieving and returning equipment back to its proper placement after an in-service system check is completed.
