SPOT LIGHT

HOSEBED LOADING DOORS

SPECIFICATION: There shall be two flush mounted, stainless steel hinged horizontal doors in the outside wall of the hosebed. These doors shall be for loading of the hose going into the hosebed. These doors shall have slam latch handles and shall have door stays so that the doors will stay in the fully-opened position when loading the hose. Pull-out hose loading steps shall be provided on the rear and the right side of the body to aid in reloading the hosebed. The pull-out steps shall include an aggressive tread to comply with NFPA 1901. The steps shall be constructed in a manner that does not utilize rollers or ball bearings to seize up or jamb when operating.
